EDUCATION

Western Sydney University

Parramatta, NSW

Bachelor of Computer Science

Expected Graduation, February 2026.

- Related Coursework: Object-Oriented Programming, Database Design and Development, Statistics, Computer Networks, Systems Analysis and Design, Data Structures and Algorithms
- Concentration: Systems Programming

PROJECTS

Garden Bee Game (*Java*)

- Created using Java in the greenfoot environment and integrates fundamental programming concepts and game development principles.
- Utilized arrays to create and manage grid-based game world by randomly positioning leaves for a unique layout in each game session.
- Enabled direction-based movement with 'move' and 'turn' methods and applied 'setRotation' for realistic directional facing.
- Programmed bears to move randomly and chase the bee within a certain range.
- Integrated auditory feedback for leaf collection and bee capture events.
- Continuously checked for collisions between the bee and bears using 'getPosition' and ended game upon bear catching the bee, displaying the number of leaves collected and the final position on the grid where the bee was captured.

Restaurant Order Placement (*Python*)

- Applied Python programming to develop a system that takes customer orders and calculates total price of meal at the end.
- Program runs based on options from which customers select.
- After successfully taking orders, a tax invoice is generated based on the selections made by the customer and the order prepared to be delivered to the customer's address or table.

Personal Website (*HTML and CSS*)

- Designed and developed a visually appealing and responsive website using HTML and CSS to showcase my skills in web development.
- I curated content to highlight my experience, portfolio, and blog posts.
- The websites gives access and links to my various platforms for interactions including email, Instagram page, and YouTube channel.
- The main aesthetic features of the website are the background animations and the blend of appealing colours and images to provide user friendly interface.

Urban Rentals Database (*SQL*)

- Defined the structure of the database with tables representing entities and their attributes.
- Created an Entity Relationship Diagram (ERD) to visualise relationships and constraints.
- Executed SQL scripts to create tables with appropriate data types and constraints.
- Defined primary keys to uniquely identify records in each table and implemented foreign keys to enforce relationships between tables.
- Ensured cascading updates and deletes to maintain referential integrity.

SKILLS

Programming: Python, Java, HTML, CSS, SQL

Technical: Data Structures and Algorithms, Data Mining, Data Manipulation, Graphic Designing, Frontend Development, Backend Development.

Operating Systems: MacOS, Windows

Honors: Placed 3rd in Regional Coding Competition (Ashanti Region, Ghana) - 2022

Languages: English, French, and Akan.

Interests: Reading, Soccer, Music, Cooking.
